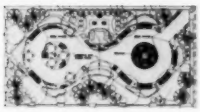
INDEX TO VOLUMES 6 AND 7

Volume 7, Number 2 (the Fall 1987 issue), is dedicated to topics related to the development, use, and dissemination of academic software, or courseware

Architecture



The teaching of landscape architecture
by Gary B. Kesler and Robert Smyser
University of Illinois at Urbana-Champaign
Vol. 6, No. 2, Fall 1986
Pages 44–49

A pioneering laboratory for computer-aided site design enables students to use microcomputer workstations instead of pencil and paper to explore and analyze landscape design problems

Arts

Computer enhancement of the *Mona Lisa*
by John F. Asmus
University of California, San Diego,
and Ralph Bernstein, Jitendra V. Dave,
and H. Joseph Myers
IBM Palo Alto Scientific Center
Vol. 7, No. 1, Spring 1987
Pages 11–22

Digital analysis of Leonardo da Vinci's *La Gioconda* reveals the probable original colors of the masterpiece, suggests the possibility that the original painting may have been changed, and indicates areas that may have been restored

Biological Sciences

Exploring new worlds—computer animation in education
by Hendrik J. Ball
British Broadcasting Corporation,
Roger R. Moore
Open University,
and Peter Quarendon
IBM UK Scientific Centre
Vol. 6, No. 2, Fall 1986
Pages 34–43

In Great Britain, the Open University and the BBC collaborate to produce computer-graphics animation sequences for educational television; a programming package developed at the IBM UK Scientific Centre aids in producing animated, three-dimensional models of macromolecules

The birds: monitors of the environment
by Charles Walcott
Cornell University
Vol. 7, No. 1, Spring 1987
Pages 67–74

A national database of bird populations, as proposed by the Cornell Laboratory of Ornithology, may be useful as an environmental early-warning system

Computer Science and Programming

Applying knowledge-based techniques to software development
by Mehdi T. Harandi
University of Illinois at Urbana-Champaign
Vol. 6, No. 1, Spring 1986
Pages 14–21

Stored expert knowledge can help programmers at all levels of experience meet increasing demands for new software products

Learning Pascal with the aid of a computer
by Ivan Tomek and Tomasz Muldner
Acadia University
Vol. 6, No. 1, Spring 1986
Pages 22–37

A programming package called PMS (Pascal Made Simple) addresses the need for computer-assisted instruction in the art of programming

Computing for the terrified
by Kittredge Cary Cowlishaw
Oxford University
and IBM UK Scientific Centre
Vol. 6, No. 2, Fall 1986
Pages 16–19

A short course at Oxford University provides a gentle introduction to computers

Exploring new worlds—computer animation in education
by Hendrik J. Ball
British Broadcasting Corporation,
Roger R. Moore
Open University,
and Peter Quarendon
IBM UK Scientific Centre
Vol. 6, No. 2, Fall 1986
Pages 34–43

In Great Britain, the Open University and the BBC collaborate to produce computer-graphics animation sequences for educational television; a programming package developed at the IBM UK Scientific Centre aids in producing animated, three-dimensional models of macromolecules

Computer-controlled videodiscs in a university setting
by Joan Sustik Huntley and Marilyn Knight
University of Iowa
Vol. 6, No. 2, Fall 1986
Pages 50–56

Instructional videodisc programs are being developed at the University of Iowa for a variety of courses with the aid of *Scripter*, a tool for writing the programs, and *VIDMASTER*, a data management program

Computing at Brown—an ongoing study
by Mark Shields
Brown University
Vol. 6, No. 2, Fall 1986
Pages 57–62

At Brown University, social scientists are conducting a series of research projects aimed at understanding the social and educational significance of computing in higher education

The two cultures of academic computing
by Ronald F. E. Weissman
University of Maryland
Vol. 7, No. 2, Fall 1987
Pages 4–13

Technical support for faculty development of software and a tangible reward structure are needed to bridge the gap between traditional academic computing and new, "nontraditional" user communities spawned by the widespread availability of microcomputers

With commentaries by Peter A. Batke of Duke University and Joseph D. Novak of Cornell University

Computing in the university—the implications of new technologies
by Raymond K. Neff
University of California at Berkeley
Vol. 7, No. 2, Fall 1987
Pages 14–24

New computing technologies offer many possibilities for the campus of the future in terms of the creation, management, and dissemination of knowledge

With commentaries by Donald D. Cowan and J. Wesley Graham of the University of Waterloo and Gerald J. Porter of the University of Pennsylvania

Issues in instructional computing
by Stanley R. Trollip
University of Minnesota
Vol. 7, No. 2, Fall 1987
Pages 25–33

Widespread use of instructional software depends on the choice of topics, the quality of the software, and institutional support for software development

With commentaries by Joseph M. Ballay of Carnegie Mellon University and Michael Wiseman of the University of California at Berkeley

The next generation of academic microcomputer software
by Wayne Danielson
University of Texas at Austin
Vol. 7, No. 2, Fall 1987
Pages 34–40

A nationwide database of academic computer projects provides fascinating glimpses of future teaching and research projects

With commentaries by James L. Lee of the University of Wisconsin–Madison and Stanley G. Smith of the University of Illinois at Urbana-Champaign

Educational software—getting started
by William H. Graves
University of North Carolina at Chapel Hill
Vol. 7, No. 2, Fall 1987
Pages 41–51

A project at the University of North Carolina involves faculty members from a broad range of disciplines in the development of personal-computer software as an educational tool and as a medium for teaching and learning

With commentaries by William O. Beeman of Brown University and Robert W. Hendersen of the University of Illinois at Urbana-Champaign

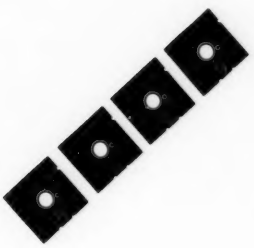
Instructional computing—professional implications for faculty
by Richard C. Ferguson
Yale University
Vol. 7, No. 2, Fall 1987
Pages 52–57

Potential benefits related to faculty development of instructional software range from personal satisfaction and better teaching to professional recognition, but software development involves an expenditure of resources and is not a substitute for personal scholarship

With commentaries by G. Phillip Cartwright of Pennsylvania State University and Wallace T. Fowler of the University of Texas at Austin

The realities of courseware publishing
by Thomas L. Sears
COMPress, a division of Wadsworth, Inc.,
and Serje G. Seminoff
John Wiley & Sons, Inc.
Vol. 7, No. 2, Fall 1987
Pages 58–62

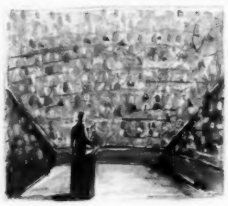
Representatives of two publishing houses respond to key questions about the publishing of courseware



Information sharing and software distribution
by Susan Krala
University of Washington,
and Tad Pinkerton
University of Wisconsin–Madison
Vol. 7, No. 2, Fall 1987
Pages 63–67

The sharing of information about academic applications of computers and the distribution of academic software are facilitated by IBM-supported projects at the University of Washington and the University of Wisconsin–Madison

Education



The BIJOU Teaching Support System
by Michael Wiseman
University of California, Berkeley
Vol. 6, No. 1, Spring 1986
Pages 4–13

Large lecture classes are more manageable using an integrated record-keeping and communications system developed experimentally at the University of California, Berkeley

The impact of microcomputers on education
by Richard M. Cyert
Carnegie Mellon University
Vol. 6, No. 2, Fall 1986
Pages 4–8

With appropriate software, university networks of personal workstations will facilitate remedial learning, enhance comprehension and problem-solving abilities, improve the student's motivation to learn, and stimulate learning outside the classroom

The two cultures of academic computing
by Ronald F. E. Weissman
University of Maryland
Vol. 7, No. 2, Fall 1987
Pages 4–13

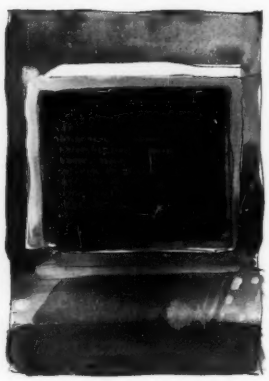
Technical support for faculty development of software and a tangible reward structure are needed to bridge the gap between traditional academic computing and new, "nontraditional" user communities spawned by the widespread availability of microcomputers

With commentaries by Peter A. Batke of Duke University and Joseph D. Novak of Cornell University

Computing in the university—the implications of new technologies
by Raymond K. Neff
University of California at Berkeley
Vol. 7, No. 2, Fall 1987
Pages 14–24

New computing technologies offer many possibilities for the campus of the future in terms of the creation, management, and dissemination of knowledge

With commentaries by Donald D. Cowan and J. Wesley Graham of the University of Waterloo and Gerald J. Porter of the University of Pennsylvania



Issues in instructional computing
by Stanley R. Trollip
University of Minnesota
Vol. 7, No. 2, Fall 1987
Pages 25–33

Widespread use of instructional software depends on the choice of topics, the quality of the software, and institutional support for software development

With commentaries by Joseph M. Ballay of Carnegie Mellon University and Michael Wiseman of the University of California at Berkeley

The next generation of academic microcomputer software
by Wayne Danielson
University of Texas at Austin
Vol. 7, No. 2, Fall 1987
Pages 34–40

A nationwide database of academic computer projects provides fascinating glimpses of future teaching and research projects

With commentaries by James L. Lee of the University of Wisconsin–Madison and Stanley G. Smith of the University of Illinois at Urbana-Champaign

Educational software—getting started
by William H. Graves
University of North Carolina at Chapel Hill
Vol. 7, No. 2, Fall 1987
Pages 41–51

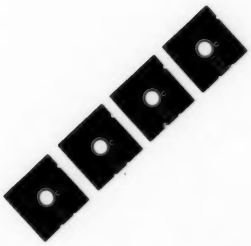
A project at the University of North Carolina involves faculty members from a broad range of disciplines in the development of personal-computer software as an educational tool and as a medium for teaching and learning

With commentaries by William O. Beeman of Brown University and Robert W. Hendersen of the University of Illinois at Urbana-Champaign

Instructional computing—professional implications for faculty
by Richard C. Ferguson
Yale University
Vol. 7, No. 2, Fall 1987
Pages 52–57

Potential benefits related to faculty development of instructional software range from personal satisfaction and better teaching to professional recognition, but software development involves an expenditure of resources and is not a substitute for personal scholarship

With commentaries by G. Phillip Cartwright of Pennsylvania State University and Wallace T. Fowler of the University of Texas at Austin



The realities of courseware publishing
by Thomas L. Sears
COMPress, a division of Wadsworth, Inc.,
and Serje G. Seminoff
John Wiley & Sons, Inc.
Vol. 7, No. 2, Fall 1987
Pages 58–62

Representatives of two publishing houses respond to key questions about the publishing of courseware

Information sharing and software distribution
by Susan Krala
University of Washington,
and Tad Pinkerton
University of Wisconsin–Madison
Vol. 7, No. 2, Fall 1987
Pages 63–67

The sharing of information about academic applications of computers and the distribution of academic software are facilitated by IBM-supported projects at the University of Washington and the University of Wisconsin–Madison

---

Engineering

The personal computer in engineering education
by Seymour V. Pollack, Jeffrey L. Posdamer,
and Jerome R. Cox, Jr.
Washington University in St. Louis
Vol. 6, No. 1, Spring 1986
Pages 38–47

A versatile computer laboratory for engineering majors is helping undergraduates and professional engineers as well

The future of university/industry research
by David P. Gardner
University of California
Vol. 7, No. 1, Spring 1987
Pages 4–10

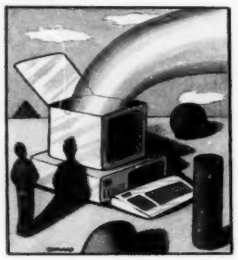
For the nation's economic health and the well-being of our society, it is imperative that universities and industry maintain close ties in terms of cooperative research

Environmental Sciences

The birds: monitors of the environment
by Charles Walcott
Cornell University
Vol. 7, No. 1, Spring 1987
Pages 67–74

A national database of bird populations, as proposed by the Cornell Laboratory of Ornithology, may be useful as an environmental early-warning system

Humanities



Simulations and experiments in philosophy of science
by Robert L. Causey
University of Texas at Austin
Vol. 7, No. 1, Spring 1987
Pages 23–33

Interactive computer programs that simulate abstract relationships and operations require students to use inductive reasoning, to form and test hypotheses, and to analyze the functions of systems and the reasoning processes required to understand them

Graphics display of foreign scripts
by John R. Abercrombie
University of Pennsylvania
Vol. 7, No. 1, Spring 1987
Pages 43–51

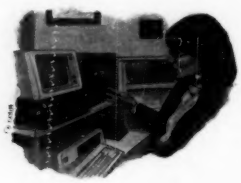
The Graphics Project at the University of Pennsylvania has developed routines for generating exotic fonts on microcomputers, as well as a full-screen editor for textual research, for correcting optically scanned texts, and for entering exotic scripts into existing ASCII files

Journalism

The production and teaching of broadcast news
by Gale F. Wiley
University of Texas at Austin
Vol. 7, No. 1, Spring 1987
Pages 34–42

In the Broadcast News Laboratory at the University of Texas at Austin, a network of personal computers has been integrated into every phase of broadcast news journalism

Medical Sciences



Computer-controlled videodiscs in a university setting
by Joan Sustik Huntley and Marilyn Knight
University of Iowa
Vol. 6, No. 2, Fall 1986
Pages 50–56

Instructional videodisc programs are being developed at the University of Iowa for a variety of courses with the aid of *Scripter*, a tool for writing the programs, and *VIDMASTER*, a data management program

Psychology through self-discovery
by Robert W. Hendersen
University of Illinois at Urbana-Champaign
Vol. 7, No. 1, Spring 1987
Pages 52–56

At the University of Illinois, access to microcomputers in psychology laboratories is changing not only *what* is taught to beginning students, but *how* it is taught

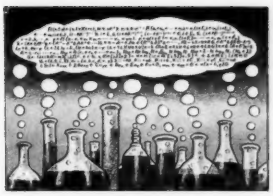
Physical Sciences

Teaching computational physics
by Steven E. Koonin
California Institute of Technology
Vol. 6, No. 2, Fall 1986
Pages 9–15

Students use the computer as a tool for doing research-level work in the Advanced Computational Physics Laboratory at Caltech

The video laboratory— a new element in teaching chemistry
by Stanley G. Smith and Loretta L. Jones
University of Illinois at Urbana-Champaign
Vol. 6, No. 2, Fall 1986
Pages 20–26

The computer-assisted videodisc combines computer and video techniques in a powerful instructional tool that could change the way chemistry is taught



The future of university/industry research
by David P. Gardner
University of California
Vol. 7, No. 1, Spring 1987
Pages 4–10

For the nation's economic health and the well-being of our society, it is imperative that universities and industry maintain close ties in terms of cooperative research

Simulations and experiments in philosophy of science
by Robert L. Causey
University of Texas at Austin
Vol. 7, No. 1, Spring 1987
Pages 23–33

Interactive computer programs that simulate abstract relationships and operations require students to use inductive reasoning, to form and test hypotheses, and to analyze the functions of systems and the reasoning processes required to understand them

---

Social Sciences

The simulation of prehistoric hunting practices
by John W. Rick
Stanford University
Vol. 6, No. 2, Fall 1986
Pages 27–33

Microcomputer simulations aid in understanding the effects of various hunting strategies on prehistoric populations of game animals

Computing at Brown— an ongoing study
by Mark Shields
Brown University
Vol. 6, No. 2, Fall 1986
Pages 57–62

At Brown University, social scientists are conducting a series of research projects aimed at understanding the social and educational significance of computing in higher education

SPA — the Simulated Political Arena
by Steven J. Rosenstone
University of Michigan,
and Douglas W. Rae
Yale University
Vol. 7, No. 1, Spring 1987
Pages 57–66

A new introduction to the study of politics involves undergraduates in computer games designed to illuminate fundamental political concepts
